EDUCATION

San Jose State University

B.S. Software Engineering, Minor in Business

San Jose, CA

Expected May 2027

- Coursework: Data Structures & Algorithms, Computer Architecture, Operating Systems, Machine Learning, Database Systems

EXPERIENCE

Lunon AI

Software Engineering Intern

San Francisco, CA

May 2026 – Present

- Shipped **40+** production commits (**65K+** LOC) to an AI due-diligence platform backed by **General Catalyst** and **SV Angel**, generating consulting-grade reports, slide decks, and financial models end-to-end
- Built source-tiering and cite-or-prune enforcement ensuring every generated claim cites a vetted primary source, driving unverified content in client deliverables to **zero**
- Engineered deterministic chart rendering (waterfalls, bridges, scatter matrices) with grounded totals and collision-free labeling, benchmarked head-to-head against **McKinsey**-published exhibits
- Hardened report generation with deterministic text sanitization and exhibit dedup/interleaving, eliminating entire classes of layout defects across **100+** page deliverables

Delta Dental

Software Engineering Intern

Oakland, CA

Jun 2025 – Apr 2026

- Cut SOQL round trips by **90%** and improved case retrieval latency **10x** for **50+** agents using recursive Apex
- Built an OpenAI email service powering **500+** outbound leads daily, saving reps **5 min** per lead
- Supported real-time messaging via Platform Events handling **1K+** agent messages/day with polling fallback

SJSU College of Engineering

Software Engineering Intern

San Jose, CA

Jan 2025 – Jun 2025

- Built full-stack faculty discovery platform with **React** and **Spring Boot** used by **150+** students
- Designed BST-based ranking pipeline indexing **4.8K+** faculty records across **6.4K+** course mappings

SJSU Theta Tau

Web Development Project Manager

San Jose, CA

Nov 2024 – Present

- Co-own production website serving **1K+** visitors/month and supporting recruiting for **25+** pledges/semester
- Implemented GitHub Actions CI/CD pipeline that cut manual update time by **40%** and stabilized releases

PROJECTS

Cinema Archive | *Next.js, PostgreSQL, Redis, AWS (EKS, S3, CloudFront, RDS), Kubernetes, Terraform, PyTorch*

- Architected multi-service platform on **AWS EKS** indexing **2K+** films with semantic embeddings at **<100ms p95**
- Split FastAPI and embedding workers on Kubernetes with Redis queues; served media via **S3 + CloudFront** CDN
- Provisioned infra as code with **Terraform** and instrumented Prometheus/Grafana for p95 latency and queue depth

SeriesScope - NBA series simulator | *C++, Qt, SQLite, Python, nba_api, CMake*

- Built native **C++/Qt** desktop simulator forecasting playoff series from normalized team data
- Achieved **6x** speedup by designing a multithreaded Monte Carlo engine with deterministic per-thread RNG
- Benchmarked at **30M+ simulations/sec** multithreaded (1M sims in ~33ms median) on Apple M1

ER Dashboard | *Next.js, FastAPI, MongoDB, AWS (Lambda, SQS, S3), Twilio, Mapbox, OpenAI*

- Cut dispatcher triage overhead **42%** by clustering redundant 911 calls via an **NLP fingerprinting** pipeline
- Architected **event-driven ingest** with **Twilio** → **Lambda** → **SQS** → **FastAPI** and S3 transcript replay
- Extracted incident type, severity, and location signals from raw call transcripts, scoring **1.00 F1** on project eval set
- Built Prometheus/Grafana observability for FastAPI and SQS, tracking latency, errors, retries, and pipeline health

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript/TypeScript, SQL, Bash, Apex

Frameworks: React, Next.js, Node.js, Express, FastAPI, Qt, Tailwind CSS, PyTorch

Cloud/Infra: AWS (EKS, ECS, Lambda, S3, RDS, SQS, CloudFront, CloudWatch), Terraform, Docker, Kubernetes

Tools & Data: Linux (Ubuntu), Redis, Prometheus, Grafana, GitHub Actions, PostgreSQL, MongoDB, pgvector, SQLite

INTERESTS

Typing (180 WPM), badminton (HS varsity captain, league champion), basketball (youth coach), cooking, speedcubing
